## Administrative Resilience

### CALL-FOR-PAPERS

## Climate Change and Administrative Resilience: Achieving SDGs goals?

Chair:

**George Labaki**

Chairman of the Board

National School of Administration, Lebanon

Achieving the Sustainable Development Goals (SDGs) and eradicating poverty requires talking about the threat of climate change and more broadly about natural disasters. In this framework, building administrative resilience can protect from losses and parallel boost economic growth, creates jobs, and strengthen access to health care and education.

Climate change and disaster resilience are covered by three global agreements: The Paris Agreement on Climate Change, the Sendai Framework on Disaster Risk Reduction and the 2030 Agenda for Sustainable Development.

This panel suggests addressing the following issues:

- How does administrative resilience help to adapt to the socio-economic and political impacts of climate change? Does a climate change effect require new policies next to traditional public administration roles and practices?
- Theoretical contributions on how administrative resilience may reduce the risks of climate change and disasters effects?
- The experience of developed or developing countries in addressing climate change through innovative and successful administrative resilience policies in terms of governance, capacity building, cities and rural risk management, risk management, institutional changes, population displacement, fighting hunger, creating jobs, clean water, building administrative resilience...
- Administrative resilience and recovery preparedness to deal with climate change through planning, implementation and resilience framework for measuring SDGs such as sustainable energy, sustainable transport...
